

Visualisasi data menggunakan ggplot2

Pendahuluan

- `ggplot2` merupakan pustaka visualisasi pada bahasa pemrograman R.
- Dibangun berdasarkan konsep penambahan lapisan (*layer*) dalam visualisasi.
- Terdapat 7 lapisan: Data, Aesthetics, Geometries, Facets, Statistics, Coordinates, Themes.
- 4 lapisan terakhir tidak wajib, namun dpt digunakan untuk kostumisasi.

```
library(ggplot2)

```

```
# Lapisan 3): Geometrics  
p1 <- ggplot(data = mtcars,  
  aes(x = mpg, y = hp))  
p1 + geom_point()
```

```
# 4) Layer 4: Facets
## Membuat kita dapat memplot banyak grafik di dalam satu kanvas

# 5) Layer 5: Statistics

# 6) Layer 6: Coordinates
## Membatasi limit sumbu-x dan y

# 7) Lapisan 7: Theme
## Menambahkan tema ke dalam suatu plot

Cheatsheet : <https://rstudio.com/wp-content/uploads/2015/03/ggplot2-cheatsheet.pdf>

```
p1 <- ggplot(data = movies,  
             aes(x = rating))  
p1 + geom_histogram()
```

```
`stat_bin()` using `bins = 30`. Pick better value with `binwidth`.
```

```
# Untuk mengetahui lebih lanjut, perintahkan:  
# help("geom_histogram")
```

```
p1 + geom_histogram(binwidth=0.1) # binwidth = 0.1
```

```
p1 + geom_histogram(binwidth=0.1, bins=100) # defaultnya bins = 30
```

```
p1 + geom_histogram(binwidth=0.1, bins=100,  
  color = 'red', fill='green',  
  alpha = 0.4)
```

Menambahkan label

```
p12 <- p1 + geom_histogram(binwidth=0.1, bins=100,  
  color = 'red', fill='green',  
  alpha = 0.4)  
p12 + xlab('Rating Film') + ylab('Banyaknya') + ggtitle("Histogram")
```

Histogram

Teknik aesthetics lanjutan

```
p1 + geom_histogram(binwidth=0.1, aes(fill= ..count..))
```

Scatterplot

```
df <- mtcars
head(df)
```

```

```
p1 + geom_point(color = 'red', size=4, alpha = 0.5)
```

```
# Untuk mengetahui secara lebih lanjut, perintahkan:

Menambahkan pemetaan aesthetics

```
p1 + geom_point(aes(size = hp)) # ukuran titik berdasarkan besaran hp
```

```
p1 + geom_point(aes(size = cyl)) # ukuran titik berdasarkan besaran cyl
```

```
df$cyl # bersifat kategorikal, maka kita harus menggunakan fungsi factor()

Terdapat pesan:

Warning message:
"Using size for a discrete variable is not advised."

Maka, lebih baik tidak usah digunakan

```
pl + geom_point(aes(shape=factor(cyl), size=4)) # pakai ini lebih baik
```

```
# Kita juga dapat membedakan dengan warna  
p1 + geom_point(aes(color=factor(cyl), size=4))
```

```
# Sintaks lengkap  
p1 + geom_point(aes(color=factor(cyl), shape = factor(cyl), size=4))
```

```
p1 + geom_point(aes(shape = factor(cyl), size=4), color='blue', alpha=0.5)
# menambahkan warna di luar aes
```

Hex color coding

```
p1 + geom_point(size=4, color='green')
```

Cari di mesin pencari: hex color code

```
p1 + geom_point(size=4, color='#269BC9')
```

```
p <- ggplot(df, aes(x=wt, y=mpg))
p12 <- p + geom_point(aes(color=hp), size=4)
